

# Preparing your Agency for a Digital Twin

Jon Liberzon

Emerging Technologies Process Engineering Lead, Black & Veatch  
January 21, 2026

# A Digital Twin is a:

- **dynamic** digital representation
- .....of **real-world** entities and their behaviors
- .....using **models** with static and dynamic data
- .....that enable **insights and decisions**

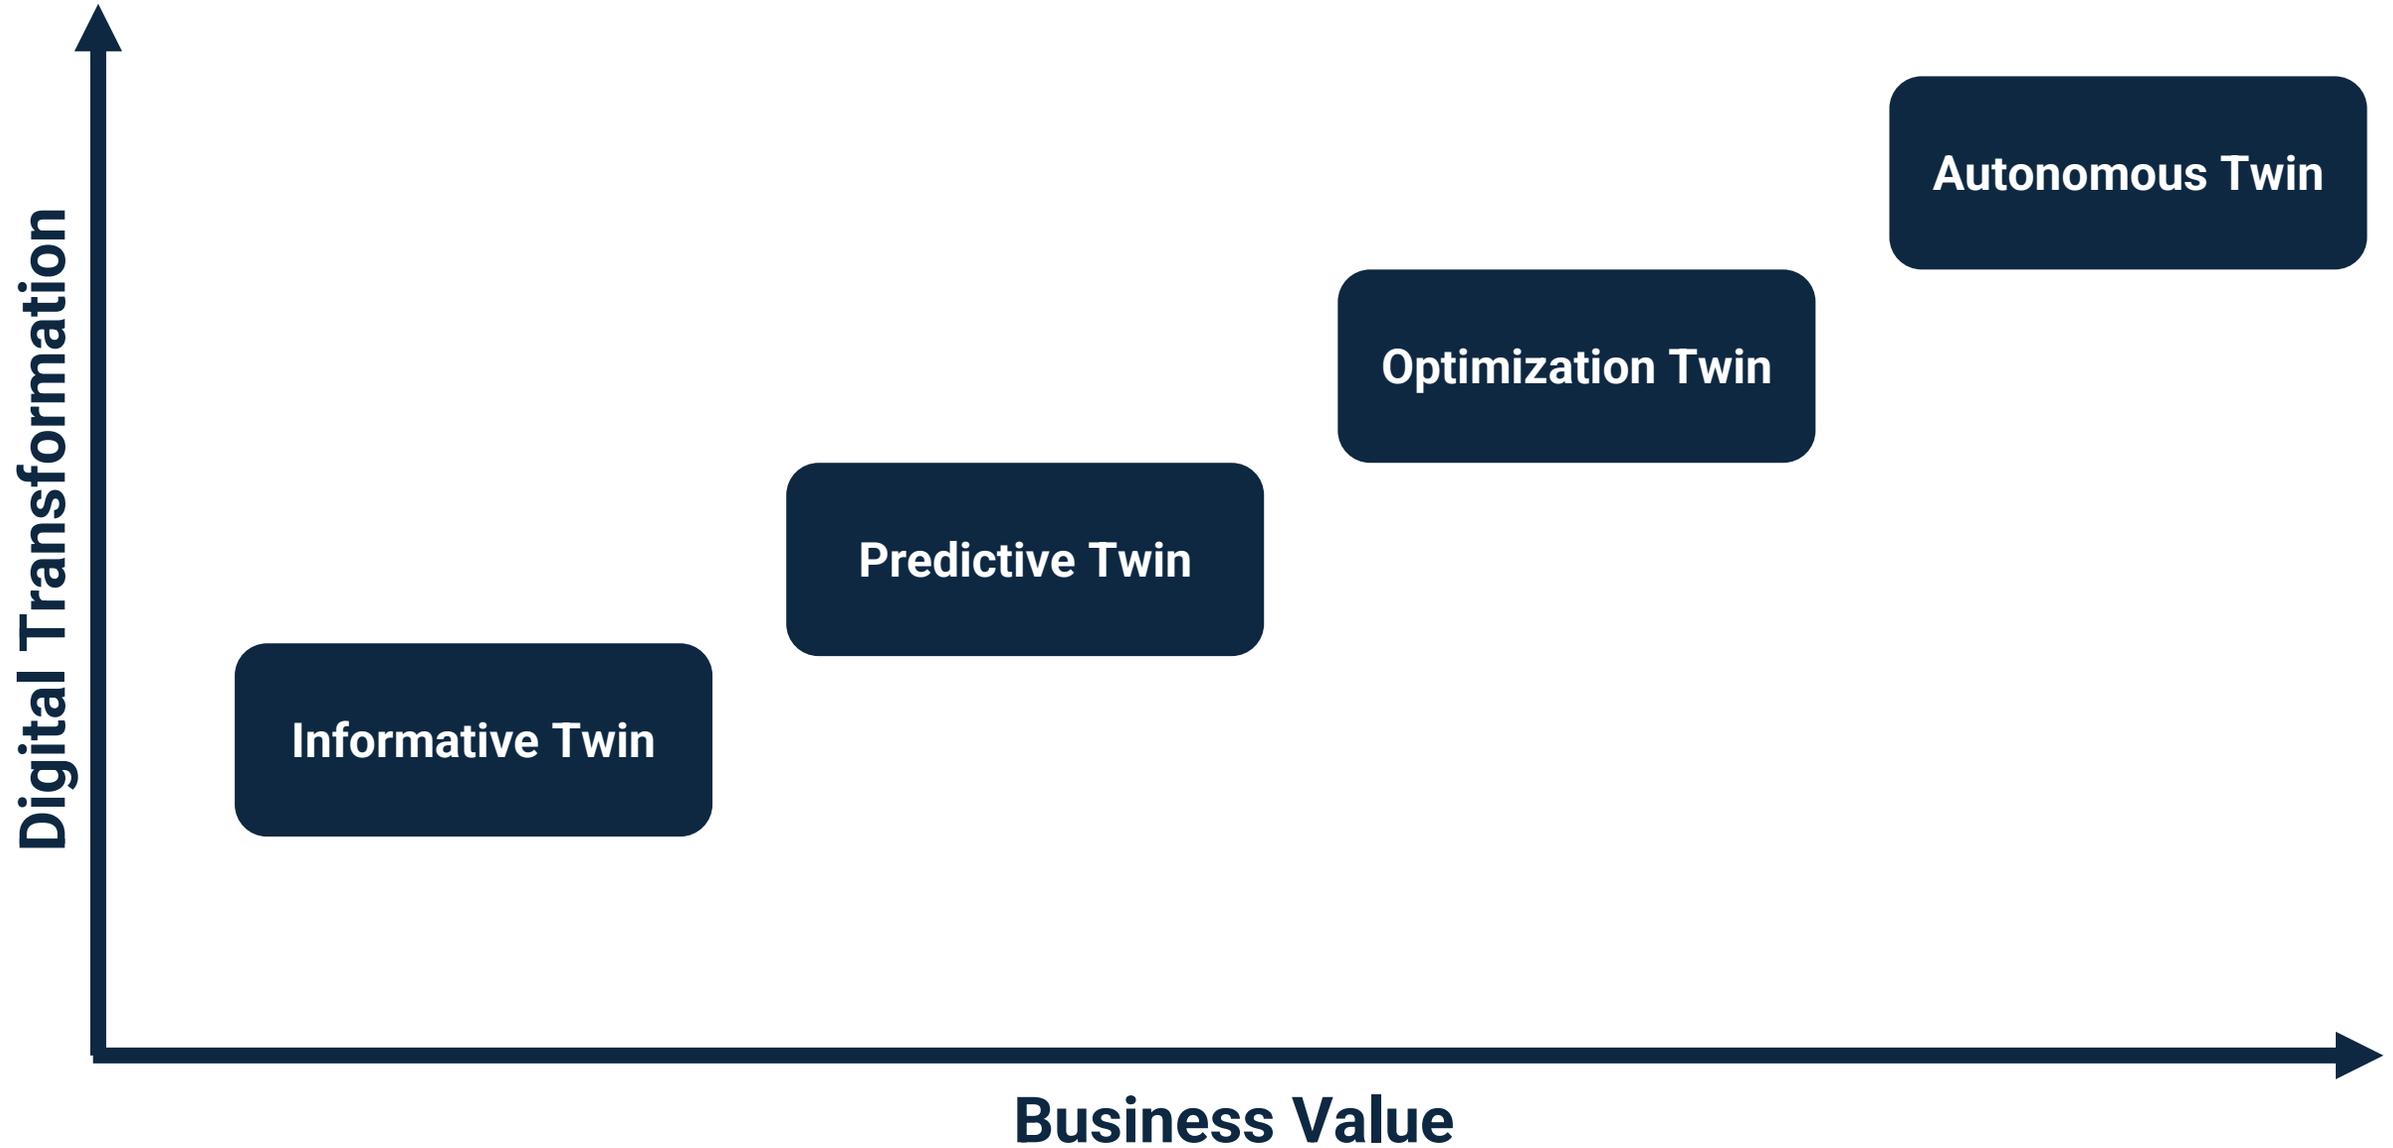

(Can be *spatial* or *operational*)

*Industry aligned definition led by SWAN Digital Twin Working Group and "American Water Works Association Digital Twins Committee"*

**SWAN**  
SMART WATER NETWORKS FORUM

# Digital Twin Maturity

# Why Now for SoCal Utilities

---

- Extreme wet-weather & aging assets increase O&M risk
- Regulatory pressures, potable reuse adoption & public expectations require predictable compliance
- Data and tools are ready.
- Workforce challenges drive towards reducing night shifts, supporting digital-native staff
- Digital twins align people, process, and data to improve decisions & outcomes

# Before you Twin:

## Preparing Your Utility

1. Develop a Digital Strategy
2. Digitize *Everything*
3. Establish a ***Unified Data Platform***
4. Automate Data Handling

# Before you Twin:

## Preparing Your Utility

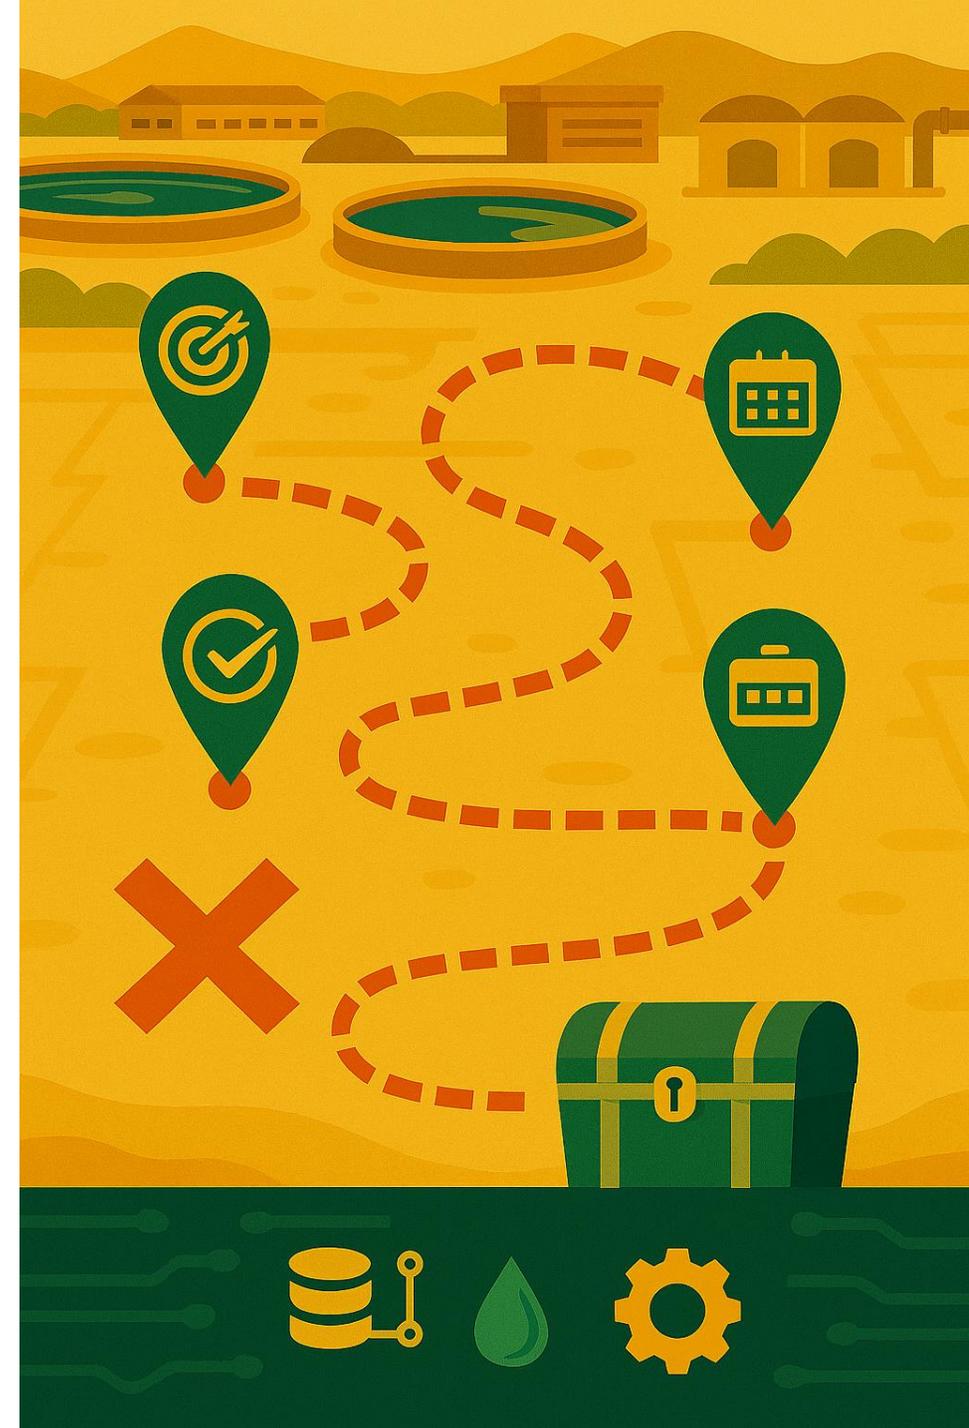

### 1. Develop a Digital Strategy

1. Define Goals
2. Define & Prioritize Projects
3. Build Schedule & Budget
4. Prepare Staff (train & explain)

2. Digitize *Everything*

3. Establish a *Unified Data Platform*  
(Break Silos)

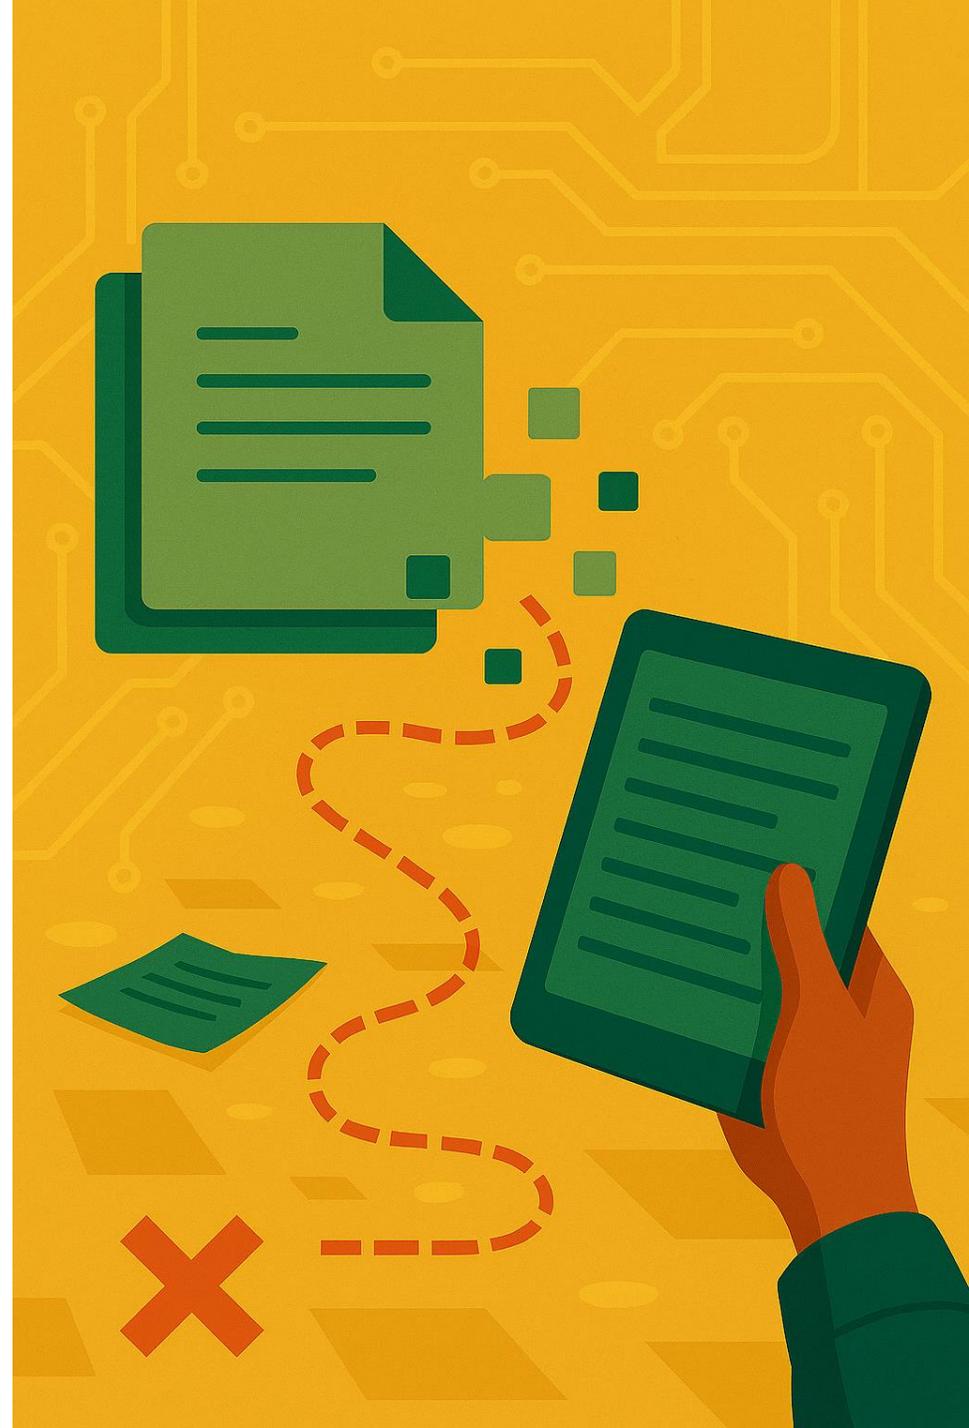

4. Automate Data Handling

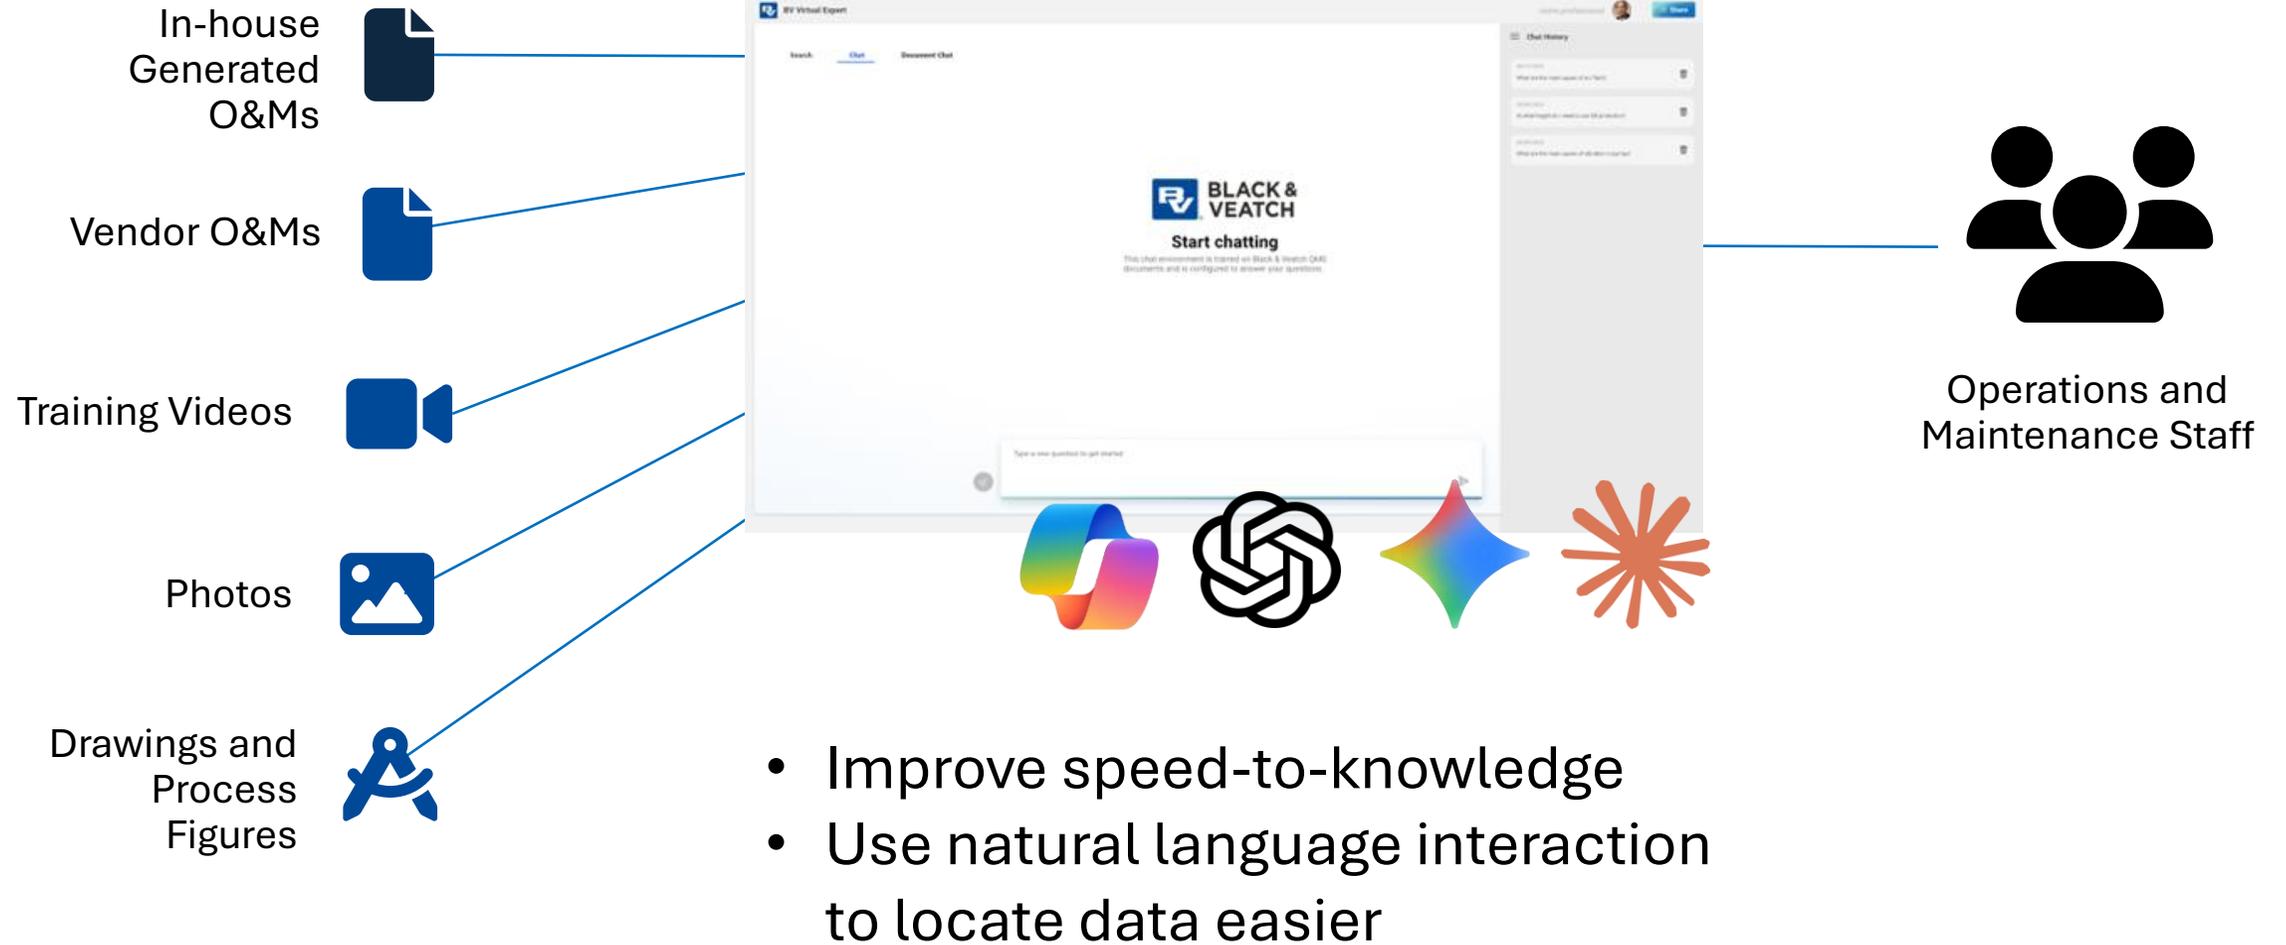

# Before you Twin:

## Preparing Your Utility

1. Develop a Digital Strategy
- 2. Digitize *Everything***
  - Logs, Forms & Checklists
  - Plant O&M & Equipment Manuals
  - SOPs, Procedures
  - Emergency Response Plans
  - Commissioning plans
3. Establish a *Unified Data Platform* (Break Silos)
4. Automate Data Handling

# Digitization Enables Chatbot O&M Assistants

# Before you Twin: Preparing Your Utility

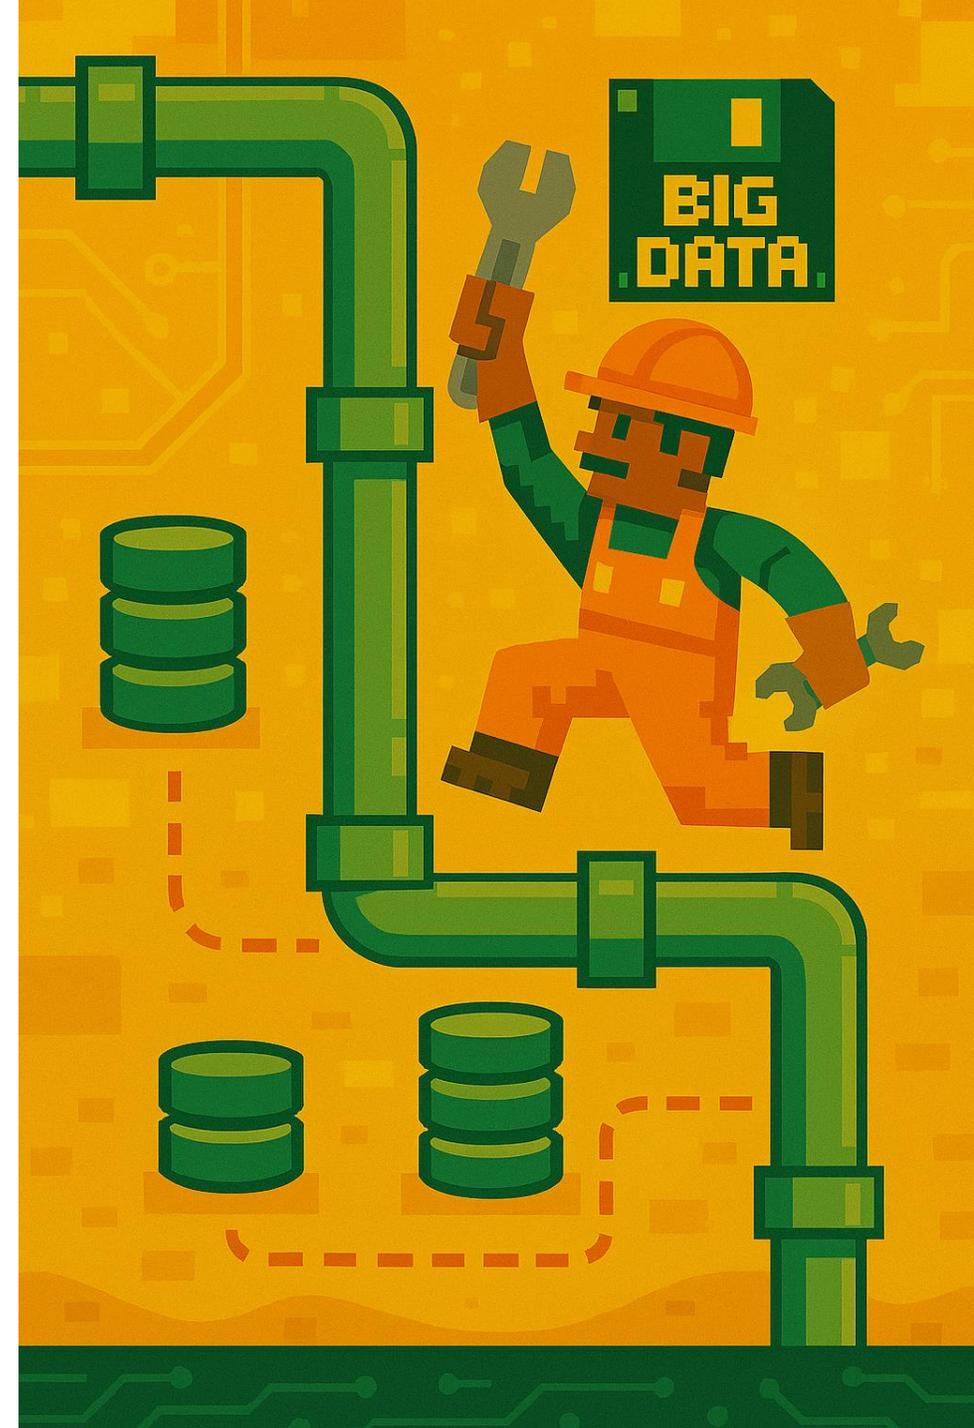

1. Develop a Digital Strategy
2. Digitize *Everything*
3. Establish a **Unified Data Platform**
  - Independent, Single Source of Truth
  - Unify SCADA/historian/lab/CMMS/GIS/finance data
  - Copy & clean data inputs
  - Warehouse, Lake, Lakehouse, all good!

# Before you Twin:

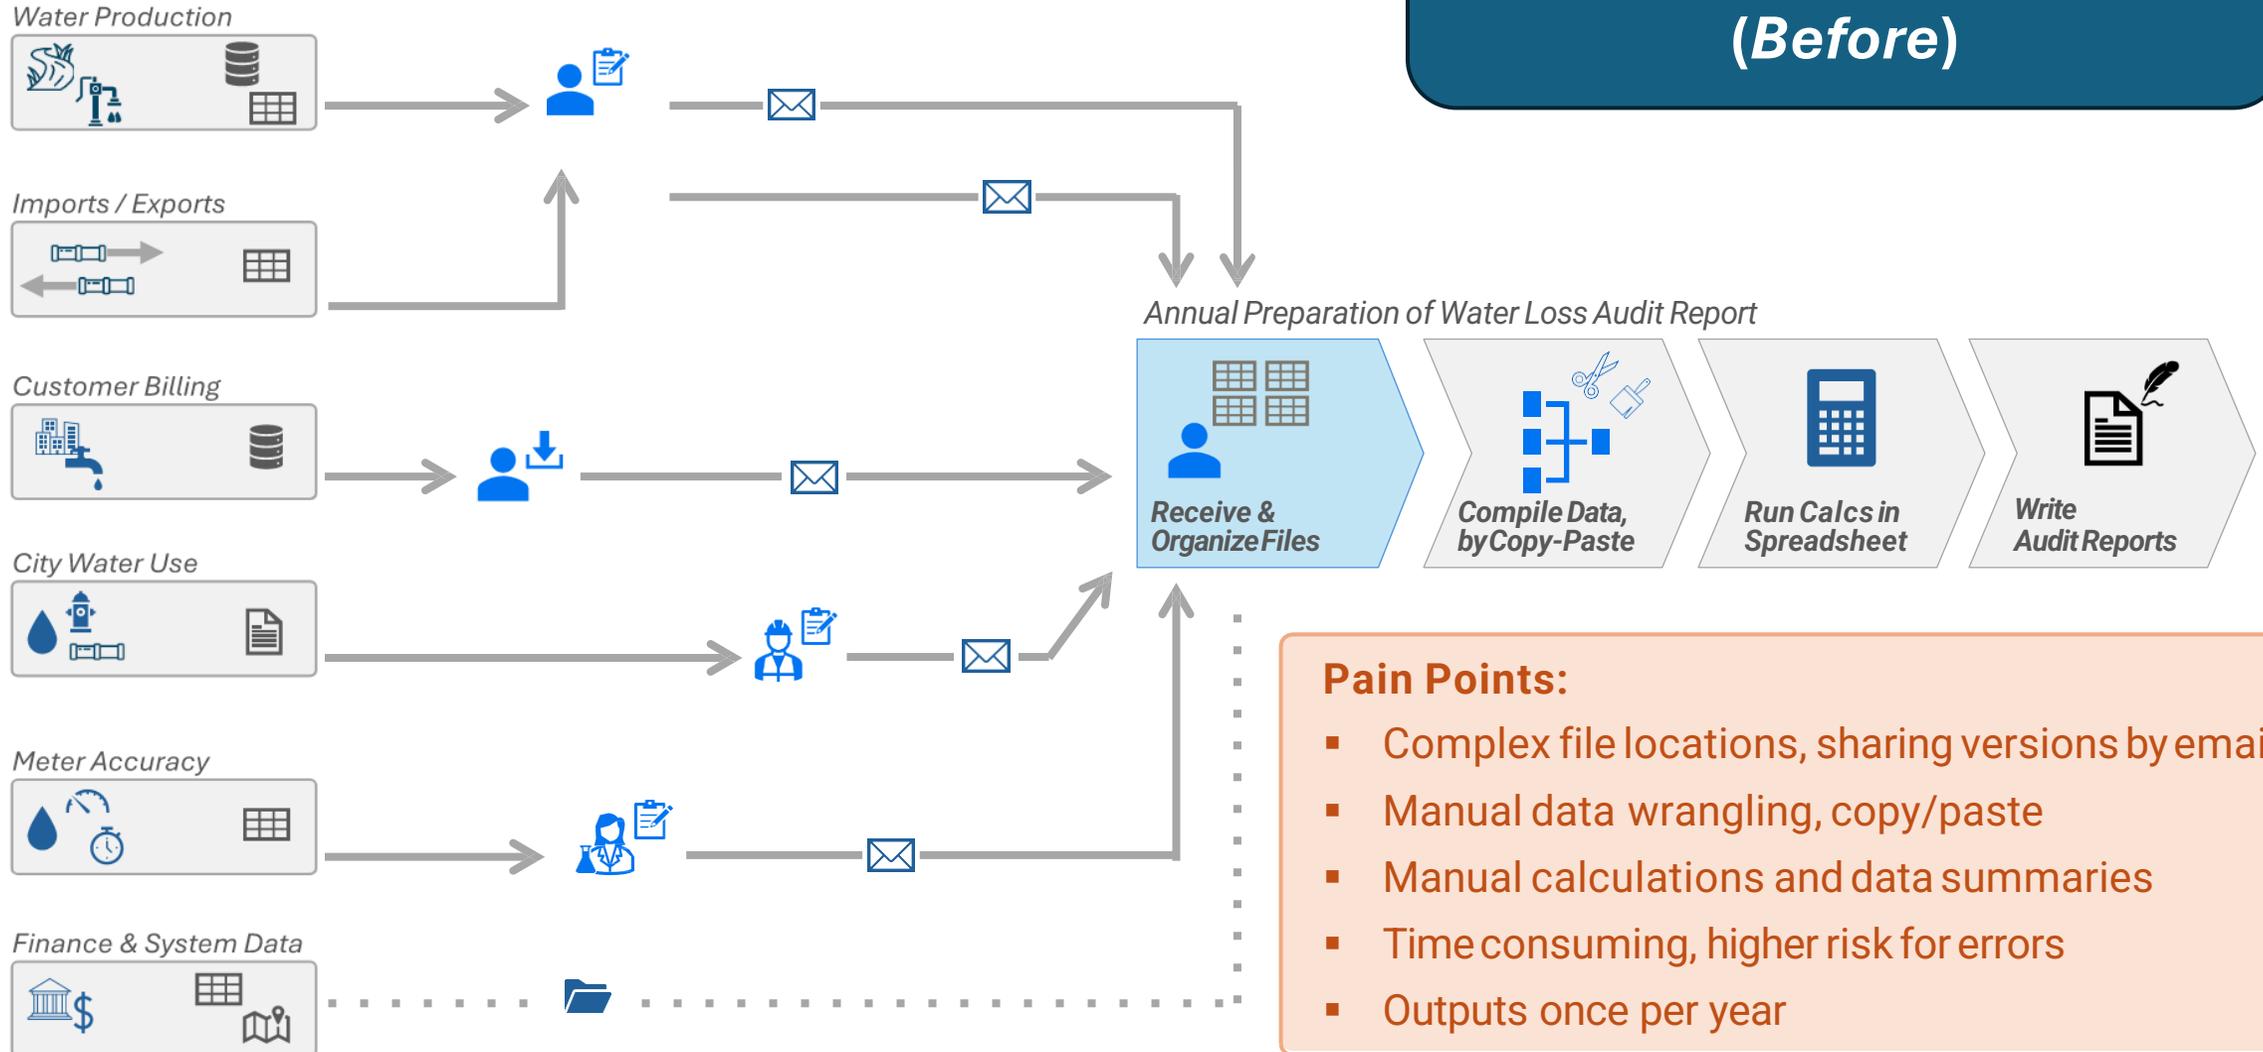

## Preparing Your Utility

1. Develop a Digital Strategy
2. Digitize *Everything*
3. Establish a *Unified Data Platform*
4. Automate Data Handling
  - a. Pipelines for QA/QC, cleansing, and scheduled refresh
  - b. Define storage, compute & security needs
  - c. Provide access thoughtfully
  - d. Avoid human bottlenecks in workflow

# Designing Your Data Pipeline

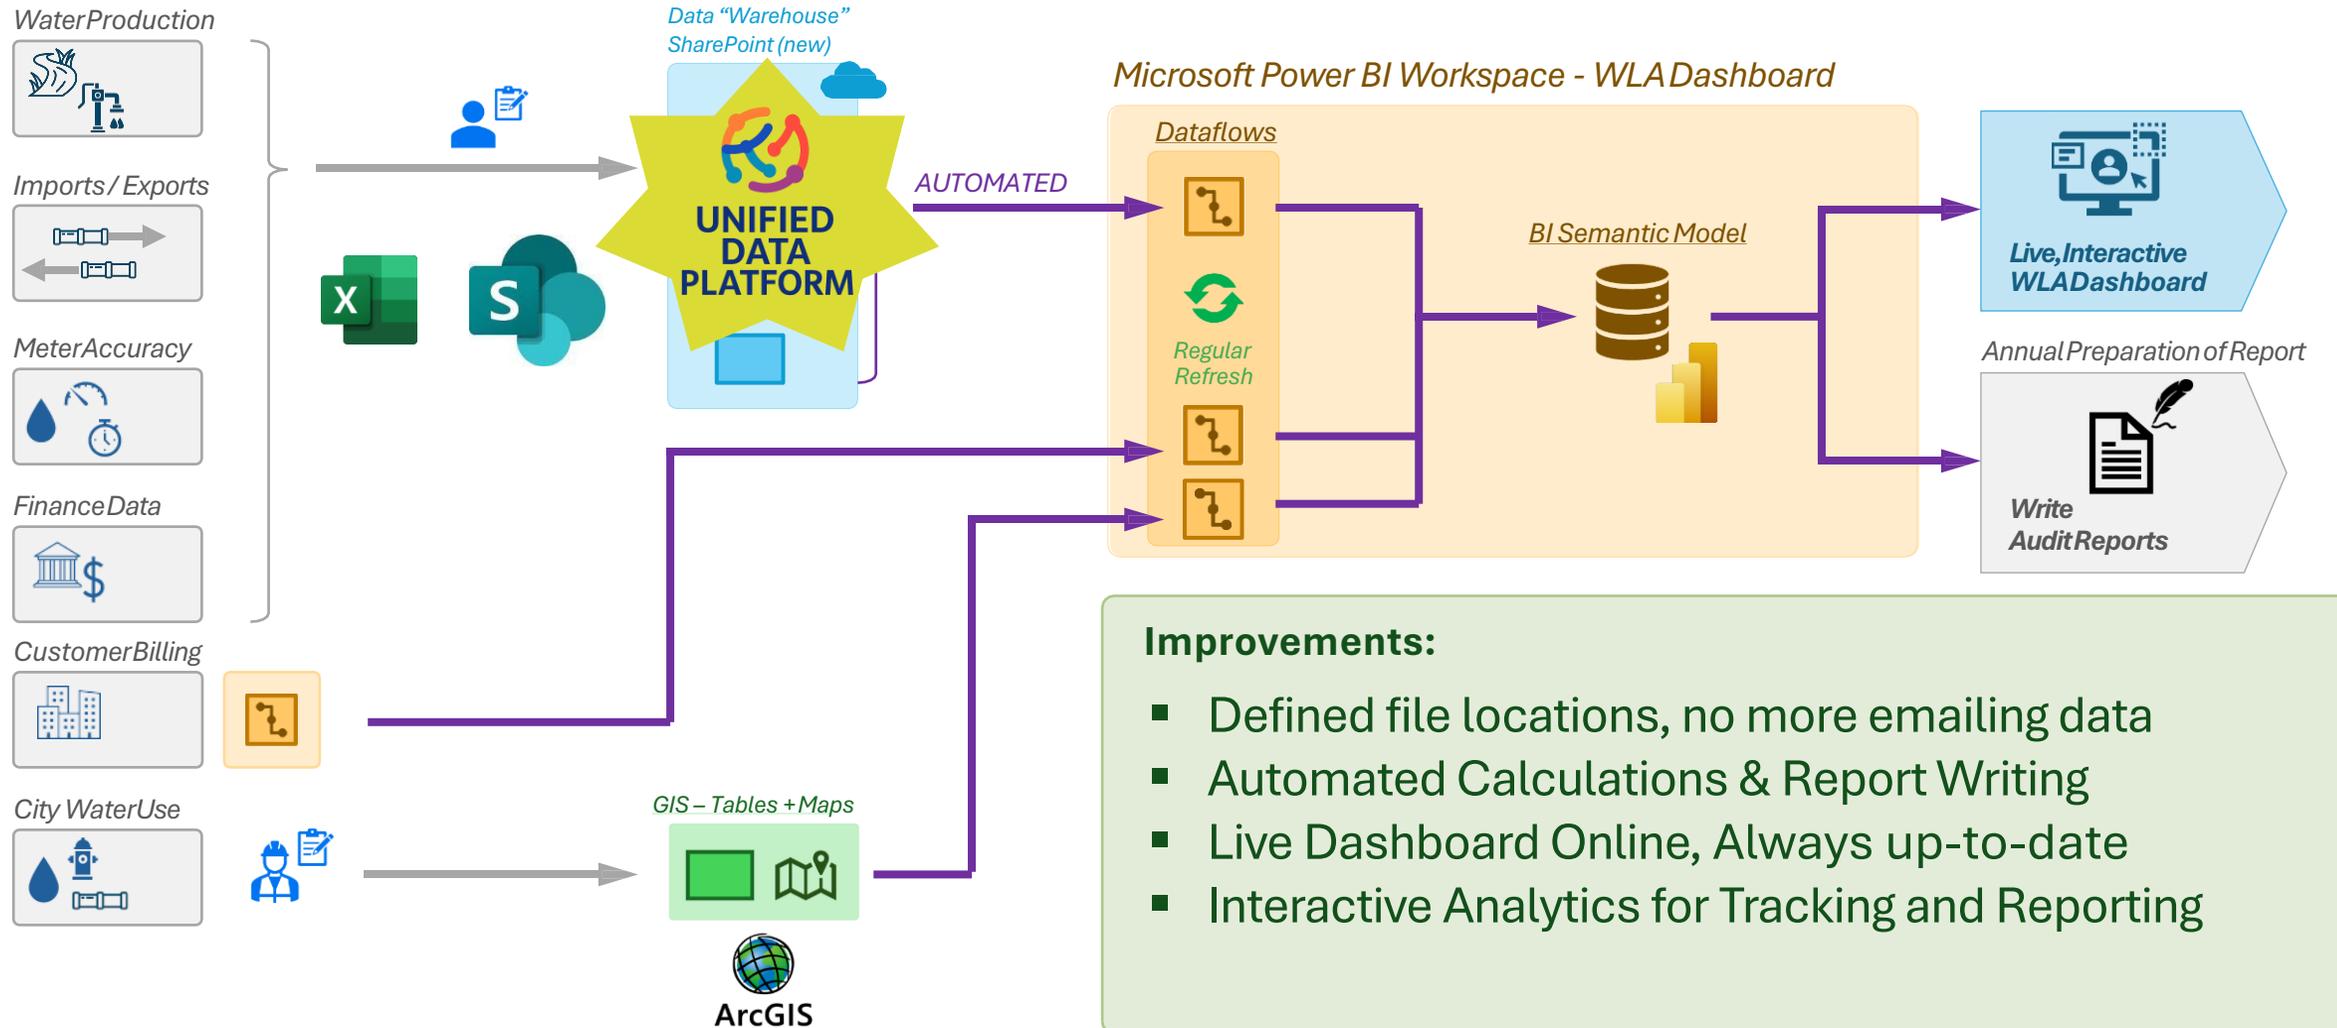

## Manual Data Collection and Annual Water Loss Reporting

**Example: Sugar Land, TX  
Annual Water Loss Audit  
(Before)**

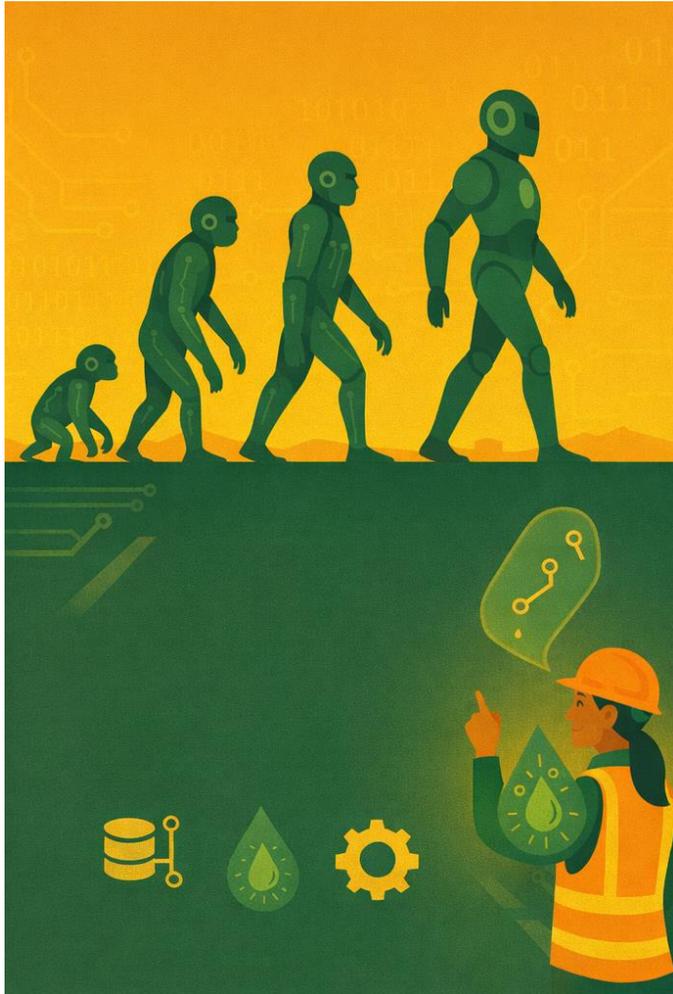

# Sugar Land, TX Annual Water Loss Audit (After)

*Integrated Data Management, Auto Refresh, Monthly Tracking*

## Digital Transformation is Not a Standard Capital Project

- **Adaptive Process:** Need flexible deadlines & smaller, more iterative work packages. Continuous improvement is better than big, discrete initiatives.
- **Staying Up to Date is Critical:** Digital tools require consistent updates & calibrations.
- **The Product is Not Software, *it's better decisions.*** Focus on preparing staff, building trust & adoption, and evolving SOPs. Define use cases before picking products.
- **You can start small:** Select one process (i.e. aeration, dewatering), define success metrics, and develop a proof-of-concept pilot.

# Thank You
